## Miniature Skeleton

### Description

---

#### Miniature Skeleton

Produced in lightweight and durable synthetic material having the color and general appearance of bone. A small scale model of the human skeleton, approx 66cm high, for teaching basic anatomy. The hands and feet, whilst moulded as single units, show the main bones. Articulated at the main joints of shoulder, elbow, wrist, hip, knee and ankle to show the relevant joint movements. The skull, with articulated lower jaw, shows the main sutures.
