

Product Code . EL-ALTE-11537

Cylinder Head

Description

Cylinder Head

This joint is sealed by a head gasket. In most engines, the head also provides space for the passages that feed air and fuel to the cylinder, and that allow the exhaust to escape. It closes in the top of the cylinder, forming the combustion chamber. The head can also be a place to mount the valves, spark plugs, and fuel injectors. In an internal combustion engine, the cylinder head (often informally abbreviated to just head) sits above the cylinders on top of the cylinder block.

We are leading manufacturers, suppliers of Cylinder Head for Automotive Lab Training Equipments. Contact us to get high quality Cylinder Head for Automotive Lab Training Equipments for schools, colleges, universities, research labs, laboratories and various industries.
