

Product Code . EL-BET-11562

Compression Testing Machine Electrically Operated

Description

Compression Testing Machine Electrically Operated

Relays are incorporated so that the motor does not restart on its own after a power breakdown. The Digital Indicator incorporates a 4-Digits display calibrated in Kilo Newton (KN) and preset to maximum load capacity fitted with micro switches to switch-off the motor when the load approaches the maximum capacity of the gauge, avoiding any over loading. The electrically operated pumping units are provided with a control knob to adjust the pace rate which can be effectively controlled by an experienced operator during the course of testing, by observing the progress of the Digital Indicator readings.

The Digital Compression Testing Machine has been designed to meet the need for a simple, economic and reliable means to test concrete for its compressive strength.

We are leading manufacturers, suppliers of Compression Testing Machine Electrically Operated for Building Engineering Trainers. Contact us to get high quality Compression Testing Machine Electrically Operated for Building Engineering Trainers for schools, colleges, universities, research labs, laboratories and various industries.
