

Product Code . EL-BET-11564

Digital Compression Testing Machine

Description

Digital Compression Testing Machine

The load gauges are fitted with a maximum load pointer. In the Electrically Operated Pumping Units, load gauges are fitted with micro switches to switch-off the motor when the load approaches the maximum capacity of the gauge, avoiding any over loading. Relays are incorporated so that the motor does not restart on its own after a power breakdown. The electrically operated pumping units are also fitted with hand operated pump. The electrically operated pumping units are provided with a control knob to adjust the pace rate which can be effectively controlled by an experienced operator during the course of testing, by observing the progress of the load gauge reading.

Compression Testing Equipment Electrically cum Manually (Hand) Operated. The loads are measured on Bourdon tube type load gauges which are calibrated against certified proving rings.

We are leading manufacturers, suppliers of Digital Compression Testing Machine for Building Engineering Trainers. Contact us to get high quality Digital Compression Testing Machine for Building Engineering Trainers for schools, colleges, universities, research labs, laboratories and various industries.
